Remote Intelligence Systems, Time Critical Decisions and Stellar Satellite Communications Ltd. Unveil New Dual Modem System the ORBISAT 100

Posted 18 November 2008 @ 11:48 am EST

Remote Intelligence Systems LLC. announces the introduction and market launch of the new ORBISAT 100 Dual Modem (GPS/GPRS/GSM) System. The ORBISAT 100 System is a new Dual GPRS/GPS Satellite tracking and communications unit, designed for all asset tracking, communications, protection and monitoring. The ORBISAT 100 is specifically designed to maximize coverage and availability of GPRS networks and GPS signal via the ORBCOMM LEO Satellite network and to take advantage of its double simm card and the Stellar GPS Satellite Communicator.

The ORBISAT 100 System is the first all-in-one Dual GPS/GPRS/GSM system to be commercialized in the USA and Latin America. The ORBISAT 100 incorporates a Stellar DS100 satellite subscriber communicator, double Simm Cards for GPRS communication, and sensors in a single enclosure, to provide 100% coverage either via ORBCOMM Satellite network or GPRS Coverage.

The ORBISAT 100 System has been validated and has received approval (ORBCOMM Type Approval Number DSC100. 08/22/08) for use in the ORBCOMM network. This approval was the result of a joint technical effort between ORBCOMM Inc.; American Tracer S.A from Argentina, and Remote Intelligence Systems LLC, USA.

"RIS has determined that competing systems in development to provide Satellite Tracking and Communications are striving to produce a "Hybrid" solution," says Mark Paepcke, Director of Business Development for Remote Intelligence Systems and owner of Time Critical Decisions (TCD). He also added, "The ORBISAT 100 system therefore is the most effective, efficient and practical system for monitoring and controlling mobile assets maximizing the use of both GPRS and GPS Networks and minimizing cost for the end user. We are now positioning the ORBISAT 100 in the USA and Latin American market as an innovative and efficient system able to provide 100% coverage and service 100% of the time. No other company is currently doing this. We are the first and only option in the market."

This new high value asset tracking and cargo protection system brings together the global coverage of ORBCOMM's low-earth orbit (LEO) satellite network with a solution that has global applications for the logistics and cargo industry's tracking, monitoring and protection.

Jairo Blanco, Director International Operations for RIS LLC positioned the ORBISAT 100 in a very specific niche market by saying, "The ORBISAT 100 provides a superior service alternative in Latin American countries where GPRS service has its limitations. Our involvement in the development of the

ORBISAT 100 was prompted by the need of some key clients to satisfy the requirements of a tracking and monitoring system that provides continuous and uninterrupted Tracking and Communications service, in country and between countries, taking advantage of the existing GPRS coverage and the excellent ORBCOMM satellite coverage and footprint in Latin America."

Blanco continued, "The ORBISAT 100 is being received with great enthusiasm in Latin America. We foresee a great demand for this unit from our Latin American clients in markets such as Argentina, Paraguay, Brazil, Chile, Peru, Colombia and Mexico. We have already started taking orders."

The ORBISAT 100 is built to satisfy the needs of customers ranging from private companies to government contractors.

About Remote Intelligence Systems LLC.

Remote Intelligence Systems LLC. a systems developer and integrator of Satellite Tracking and Communication Systems. RIS LLC. provides global marketing and sales of internet based services for use on the ORBCOMM satellite network, in partnership with Time Critical Decisions, LLC (International Value Added Reseller for ORBCOMM). RIS LLC also markets undercover surveillance, security, field awareness and reconnaissance security systems. The RIS platform is the ideal system for routine logistics while our combined expertise enables us to leverage the flexibility of the RIS platform to solve the most demanding logistics and security challenges. RIS is a proud member of the International Cargo Security Council and the American Society for Quality. RIS LLC is a privately owned Vermont company.
