 Turns your ELD into a productivity hub with Samsung's in-cab mobile technology.

When ORBCOMM's ELD solution is powered by Samsung, fleets have an opportunity to create a secure, powerful and scalable in-cab platform to improve operational efficiency and driver productivity. By combining fleets' internal and third-party apps with ORBCOMM solutions on a rugged Samsung tablet, fleet managers have the tools to improve the driving experience, increase customer satisfaction and reduce IT risks and admin costs.
Powered by Samsung

Combine Samsung in-cab devices, ORBCOMM’s BT 500 hardware platform, powerful back end reporting from FleetManager—and together you have the industry’s most productive, efficient and future-proofed ELD truck management solution on the market today. Samsung’s durable devices creates an open, scalable platform, enabling fleets to build a driver ecosystem that retains drivers, boosts customer satisfaction through better service and reduces costs with improved asset and resource utilization.

Samsung Hardware—Made for Trucking
Samsung provides powerful, versatile, mobile devices that provide defense-grade security, rugged hardware and proof-of-delivery technology to safeguard fleet data, automate manual processes and improve on-time delivery.

Productivity and efficiency - All on the one screen
Converge Android-based productivity and efficiency apps—internal or third-party—on your Samsung device and connect drivers, schedules, assets, back office and customers—all on one in-cab screen.

Designed tough for truck life
Samsung tablets are durable to withstand harsh working conditions and everyday truck life—from completing vehicle inspections out of the cab, to navigating, dispatcher communications or capturing delivery signatures.

Security on the road
Keep your fleet and customer data secure with defence-grade security from mobile security platform Samsung Knox, built into the device’s hardware and software to keep hackers out and your company’s data safe.

Stay productive during long days
Make drivers’ lives easier with the ability to track orders, capture signatures and take notes through fast data processing, high-resolution cameras that perform in low light, facial recognition, enhanced touch, glove mode, water-resistant S Pen stylus and long-lasting batteries.

Mounts and Accessories
Get multiple mounts, chargers and accessories built to your vehicle’s specifications, from top accessory providers.
The ORBCOMM ELD Bundle

Make your in-cab ELD technology easier to buy, configure and deploy with ORBCOMM’s ELD Bundle. Combine all the components you’ll need for one price—ORBCOMM’s full ELD truck management software, the Samsung Galaxy Tab Active2 or Galaxy Tab A, full data connectivity, MDM (mobile device management), ORBCOMM’s BT 500, superior customer support, high-quality enclosures and mounts from ProClip and standard warranty.

**ELD Truck Management Software**
The ELD Bundle includes a full licence for ORBCOMM’s truck management solution, which goes way beyond ELD compliance to include HOS Advisor, driver performance scoring, messaging, jobs, workflow and DVIR. The open Android platform allows carriers scale with flexibility to add functionality as their needs change.

**Your Choice of Tablet**
Choose a tablet that best suits the needs of your operation:

- Samsung’s Galaxy Tab A 8.0 performs as an entry-level and productive ELD. Its powerful processor and long battery life ensure it continues to perform efficiently during long over-the-road trips. Two high-res cameras allow drivers to improve productivity by tracking orders, capturing signatures and reconciling returns.

- The Galaxy Tab Active2 is the rugged companion for the hard road. Built to encounter drops, spills or knocks, its replaceable battery can last up to 11 hours. Out of the cab, two 8MP and 5MP cameras accurately capture field data and record high-res video. Excelling in extreme weather in Wet Touch and Glove modes, its IP-68-certified S Pen stylus allows drivers to write even in pouring rain or while wearing gloves.

**Mobile Device Management**
Control how tablets are used with MDM software installed on the devices. Tablets will be configured to your fleet’s customized policies. Internal and third-party applications will be pre-installed, and data usage can be controlled. Remote support will be used to troubleshoot the device without driver involvement.

**Mobile Deployment**
Make your mobile deployment easier with comprehensive managed mobility services—staging, kitting, inventory management, integration and MDM configuration. We configure devices, load all apps and software, and distribute devices efficiently. New and replacement devices are managed to minimize the disruption to your daily operations. Upgrades and system updates are handled to avoid your devices going offline from out-of-date software.

**Data Connectivity**
Get connected by choosing data plans that best suit your company’s and drivers’ needs.

**Mounts and Accessories**
Keep tablets secure, fully charged and within reach with high-quality, durable mobile mounting solutions. Includes rugged enclosures with integrated charging and quick release from ProClip, together with dash mounts and backing plate from RAM. Available in locking and non-locking versions. Seat-post mount options are available.

**Superior Customer Support**
Multilingual customer support comes as standard.
Contact us today at sales@orbcomm.com to see how the ORBCOMM ELD solution, powered by Samsung, can enhance the way you do business.

**Samsung Hardware**

Choose from two durable tablets that best suit the needs of your operation:

**Galaxy Tab Active2**

Strong from the inside out, the Galaxy Tab Active2 is a rugged tablet designed for life on the road. It’s built to withstand harsh conditions and is equipped with the latest digital workflow tools to maximize operational efficiency, while the built-in Samsung Knox platform keeps data secure.

**Galaxy Tab A**

Improve productivity with the powerful Galaxy Tab A, designed for workflow efficiency. Meet electronic logging requirements on the road with a long-lasting battery. Take high quality photo documentation even in low light with the high-resolution camera. Samsung Knox defense-grade security keeps business data confidential and secure.

**Rugged, mountable enclosures with integrated charging**

For the Galaxy Tab A, use the Tough Sleeve, a rugged mountable enclosure with integrated charging, available in locking and non-locking solutions. Get one-handed quick release via the Sliding Power Block Docking Interface and add a key lock for additional security. Galaxy Tab Active2 uses spring-lock charging holders for quick release. The enclosures are matched with dash mounts and backing plates from RAM to ensure a solid installation. Seat post mount options are also available.
