

ORBCOMM PARTNERS WITH NOREGON TO DELIVER COMPLETE VEHICLE FLEET MAINTENANCE

Leverages ORBCOMM's leadership in fleet telematics to provide advanced vehicle health and safety diagnostics for maximum productivity and performance

Rochelle Park, NJ, October 26, 2021 – ORBCOMM Inc., a global provider of Internet of Things (IoT) solutions, today announced a partnership with Noregon, an IoT company specializing in connected vehicle solutions, to seamlessly provide their TripVision® remote diagnostic software to ORBCOMM's vehicle customers. TripVision enhances ORBCOMM's [fleet telematics](#) offering by adding advanced vehicle and safety diagnostics for a holistic, real-time view of fleet fitness without the need for additional hardware.

ORBCOMM is committed to helping its fleet customers maximize their productivity and profitability. With TripVision, ORBCOMM's customers can monitor all makes and all models of heavy-duty vehicles and view calculated health and safety scores based on the faults on all components to optimize fleet performance and uptime. The solution can detect errors impacting [fuel consumption](#), emissions irregularities and many other issues that will lower long-term operating costs. Users receive detailed instructions to relay to drivers in real time on how to best proceed, including limiting damages and getting the truck to the appropriate technicians. The software's real-time truck monitoring also identifies problems that are harmful to productivity and safety to avoid sidelining the vehicle. Through this new offering, ORBCOMM customers can operate their fleets more efficiently and make faster, more informed business decisions regarding the health, safety and performance of their vehicles.

“We're pleased to partner with the vehicle data experts at Noregon to help our fleet customers improve their bottom-line through increased uptime, decreased maintenance costs and enhanced efficiency with this value-added solution,” said Gregg Plonisch, ORBCOMM's VP of Product Management. “We're initially rolling out TripVision for vehicle maintenance, but plan to leverage our industrial IoT expertise and add other assets to the platform, such as [dry](#) and [refrigerated trailers](#) and [heavy machinery](#), to provide a complete picture of fleet health to our global customers.”

“We're excited for this partnership with ORBCOMM because of what the dynamic TripVision platform, integrated with ORBCOMM's robust vehicle data, can bring to their customers,” said Scott Bolt, Noregon's VP of Product Management. “Our mutual goal of helping fleets maximize uptime and long-term ROI can be realized by providing tools that keep their assets running in a safer and more cost-effective manner.”
